REUSABLE HARDWARE · HOW IT WORKS

Operating the Gansulin pen

A reusable, all-metal click-dial pen that holds a standard 3 ml glass cartridge and dispenses a measured amount by an audible click per increment. Here is the full mechanical walkthrough — loading, priming, dialing, and storage.

RESEARCH USE ONLY

For laboratory research use only. Not for human or animal use. Not a medical device and not intended to diagnose, treat, or prevent any condition. The pen ships as empty, reusable dispensing hardware — no substance is included. Follow your own institution's handling and safety protocols.

A Load a cartridge

STEP 01

Uncap

Pull the cap straight off the tip end and set it aside.

STEP 02

Open the holder

Twist the cartridge holder off the body. Remove a spent cartridge if one is present.

STEP 03

Insert a cartridge

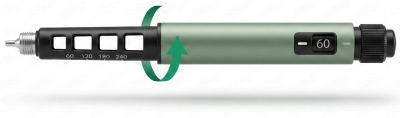

Slide a standard 3 ml glass cartridge into the holder.

STEP 04

Reset the plunger

Push the internal drive rod all the way back so it sits flush for a fresh cartridge.

STEP 05

Reattach

Twist the loaded holder back onto the body until it seats snugly.

STEP 06

Attach a tip

Screw a dispensing tip onto the threaded end, then pull off and keep its outer cover.

B Prime & flow-check

Before you rely on the dial, dial 1–2 units as a test, clear any trapped air, and prime until fluid appears at the tip. Do this whenever you fit a fresh cartridge.

STEP 01

Clear trapped air

Hold the pen tip-up and tap the holder so any air collects at the top.

STEP 02

Prime

Press the button until the counter returns to zero. A bead of fluid at the tip confirms a clear path — if none appears, repeat.

C Set a measured amount

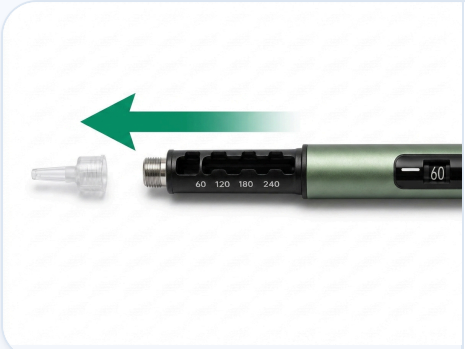

HOW THE DIAL WORKS

Turn the dial, read straight down

Turn the click-dial to the amount you need, reading the value straight down over the window. A built-in stop prevents dialing past what remains in the cartridge — the dial simply won't advance further. To dial down, turn it the other way until the window shows the right number.

D After use

CLEANUP & STORAGE

Remove the tip, re-cap, store

Re-cover the tip, unscrew it, and discard it in a suitable sharps/waste container per your protocol. Slide the pen cap back on and store the reusable pen clean and dry. The metal body is built for repeated cartridge changes.
